Inspired by cantilever bridges, whose light looks belie their hearty functionality, designers Matt and Karen Soorikian created their console.

In the Modern World April/May 2005

Structurally, this unit is inspired by the ingenuity of the cantilever bridge. It is this idea of incredible lightness amidst such weight that inspired the structure of the cantilever console. The legs are placed in such a way as to achieve equilibrium similar to the cantilever bridge. Even loaded with books, this 8 foot long piece conveys a sense of lightness that defies its storage capacity. The sliding door design allows you the flexibility to showcase or hide the contents inside. The console is available with a solid top or with open slats that allow for light to filter through the translucent glass doors. The unit is available with glass or wood shelves.
